**HEALTHCARE SECURITY & SAFETY**

## ENSURING SAFETY IN HEALTHCARE REQUIRES BALANCING STAFFING, TRAINING AND SYSTEMS. WE HAVE A FEW IDEAS FOR THAT.

Recognizing there is no “one size fits all” security solution in healthcare, HSS offers several assessment tools delivered by a team of healthcare security professionals. Regardless the size, location or complexity of an organization, HSS security professionals can assess the current status of a security program while creating a longer-term security master plan that meets the community standard.

Whether it's a focused or comprehensive assessment, HSS has the experience and data to support evidence-based healthcare security solutions. Our services include:

### **Comprehensive or Focused Security Assessment**

HSS draws from years of experience and relevant data to help organizations evaluate their healthcare security programs. From staffing, environmental design and staff training, to the use of security technology, HSS evaluates an organization's ability to create a safe care and work environment. HSS applies the same proven, risk-based approach to the entire organization or a single high-risk practice.

---

### **Behavioral Health Physical Safety Risk Assessment**

Today, all healthcare facilities, both new or existing, are required to meet comprehensive accreditation standards to ensure that risks to patient safety are minimized. The purpose of this assessment is to provide an objective evaluation of threats to patients (and staff) within this unique healthcare environment. The final deliverable identifies areas of opportunity and provides prioritized guidance through a Corrective Action Plan.

### **Security Master Planning**

An effective healthcare security master plan is about creating a "long term" solution. HSS helps organizations build master plans that optimize staffing, training, systems and evolving technology. Master planning prioritizes improvements, utilizes resources responsibly and provides a path to achieve and maintain security goals over time.

---

### **Healthcare Security Design**

Perhaps the industry's most overlooked security consideration concerns the design of the physical environment. HSS can help you build a safer facility from the ground up with informed healthcare security design ideas that are changing the way organizations and architects envision work environments. Our team of healthcare security professionals helps you create physical spaces that enhance safety, while avoiding costly redesign years down the road.

# OVERVIEW

---

Today's healthcare environment is ever-changing and so are the security risks organizations are confronted with. It is difficult for organizations to assess the quality and impact of their own healthcare security program when their point of reference lacks an informed outside perspective.

That's where we come in.

Our healthcare security professionals are routinely exposed to industry change and meaningful data from hundreds of active healthcare security programs. HSS can help your organization achieve impactful operational improvements while decreasing risk and creating safer work environments.

With a 50-year history of building successful healthcare security solutions, HSS has the longevity and the innovative track record you seek in a business relationship. We offer you unparalleled, world-class service from a professional team that acts in the best interests of our customers. Our comprehensive and ground-breaking healthcare security services have earned HSS the reputation as "industry leader."
