

SECURITY RISK CONSULTING & TRAINING

Safe in the knowledge

HELPING YOU UNDERSTAND SECURITY RISKS AT YOUR HEALTHCARE FACILITY. AND BEING PREPARED TO ADDRESS THEM.

HSS can conduct focused assessments of your high-risk departments and security programs to help you identify and mitigate potential risks or threats and workplace violence. Our recommendations will improve operating efficiencies, decrease risk, and create a safer work environment- as well as reduce the risk of costly litigation.

Full Security Assessment

This review of your current programs includes evaluating security staffing, physical security and electronic systems, data capture and analytical capabilities, workplace violence prevention programs, and general risks and vulnerabilities. We take note of performance within relevant regulations, identify areas of risk, and make business-critical recommendations.

Focused Security Program Assessment

This program evaluates physical security threats, risks and vulnerabilities, focused on specific areas at your facility. For example, within a hospital, we scrutinize security in the emergency department, the birthing/infant/pediatric units, as well exposure to workplace violence, and an assessment of the risks for patient- or visitor- generated violence. Other increasingly requested assessments include reviews of structure, design, and performance of an organization's security department.

Expert Services & Litigation Support

It's imperative that healthcare providers be able to defend their preparation and response to significant security events should they occur in their facility. Whether it's an assault in a parking structure, an infant abduction, or the use of force when subduing a violent or aggressive patient, we can help you determine, organize and prepare the pertinent facts of the adverse event to address regulatory agency requirements, or assist you in court if needed, where our senior executives have the experience and credentials to be recognized as subject matter experts.

We also offer a host of aggression management and emergency preparedness training courses. These award-winning programs exceed industry regulatory requirements, are healthcare specific, and are highly adaptable to a variety of facility applications.
